

7.5 Circular Turnings and Banking of Roads	104	10.6 Bodies in Equilibrium	172
7.6 Centrifugal Force	105	10.7 Bending of a Cyclist on a Horizontal Turn	172
7.7 Effect of Earth's Rotation on Apparent Weight	106	10.8 Angular Momentum	173
Worked Out Examples	107	10.9 $L = I\omega$	173
Questions for Short Answer	111	10.10 Conservation of Angular Momentum	173
Objective I	112	10.11 Angular Impulse	174
Objective II	113	10.12 Kinetic Energy of a Rigid Body Rotating About a Given Axis	174
Exercises	114	10.13 Power Delivered and Work Done by a Torque	175
Chapter 8		10.14 Calculation of Moment of Inertia	175
Work and Energy	118	10.15 Two Important Theorems on Moment of Inertia	178
8.1 Kinetic Energy	118	10.16 Combined Rotation and Translation	180
8.2 Work and Work-energy Theorem	118	10.17 Rolling	180
8.3 Calculation of Work Done	119	10.18 Kinetic Energy of a Body in Combined Rotation and Translation	182
8.4 Work-energy Theorem for a System of Particles	120	10.19 Angular Momentum of a Body in Combined Rotation and Translation	182
8.5 Potential Energy	121	10.20 Why Does a Rolling Sphere Slow Down ?	183
8.6 Conservative and Nonconservative Forces	121	Worked Out Examples	183
8.7 Definition of Potential Energy and Conservation of Mechanical Energy	122	Questions for Short Answer	192
8.8 Change in the Potential Energy in a Rigid-body-motion	123	Objective I	193
8.9 Gravitational Potential Energy	124	Objective II	194
8.10 Potential Energy of a Compressed or Extended Spring	124	Exercises	195
8.11 Different Forms of Energy : Mass Energy Equivalence	126	Chapter 11	
Worked Out Examples	126	Gravitation	203
Questions for Short Answer	130	11.1 Historical Introduction	203
Objective I	131	11.2 Measurement of Gravitational Constant G	204
Objective II	131	11.3 Gravitational Potential Energy	206
Exercises	132	11.4 Gravitational Potential	207
Chapter 9		11.5 Calculation of Gravitational Potential	207
Centre of Mass, Linear Momentum, Collision	139	11.6 Gravitational Field	210
9.1 Centre of Mass	139	11.7 Relation between Gravitational Field and Potential	210
9.2 Centre of Mass of Continuous Bodies	141	11.8 Calculation of Gravitational Field	211
9.3 Motion of the Centre of Mass	142	11.9 Variation in the Value of g	214
9.4 Linear Momentum and its Conservation Principle	144	11.10 Planets and Satellites	216
9.5 Rocket Propulsion	144	11.11 Kepler's Laws	217
9.6 Collision	145	11.12 Weightlessness in a Satellite	217
9.7 Elastic Collision in One Dimension	147	11.13 Escape Velocity	217
9.8 Perfectly Inelastic Collision in One Dimension	148	11.14 Gravitational Binding Energy	218
9.9 Coefficient of Restitution	148	11.15 Black Holes	218
9.10 Elastic Collision in Two Dimensions	148	11.16 Inertial and Gravitational Mass	218
9.11 Impulse and Impulsive Force	149	11.17 Possible Changes in the Law of Gravitation	219
Worked Out Examples	149	Worked Out Examples	219
Questions for Short Answer	156	Questions for Short Answer	223
Objective I	157	Objective I	224
Objective II	158	Objective II	225
Exercises	159	Exercises	225
Chapter 10		Chapter 12	
Rotational Mechanics	166	Simple Harmonic Motion	229
10.1 Rotation of a Rigid Body about a Given Fixed Line	166	12.1 Simple Harmonic Motion	229
10.2 Kinematics	167	12.2 Qualitative Nature of Simple Harmonic Motion	229
10.3 Rotational Dynamics	168	12.3 Equation of Motion of a Simple Harmonic Motion	230
10.4 Torque of a Force about the Axis of Rotation	169	12.4 Terms Associated with Simple Harmonic Motion	231
10.5 $\Gamma = I\alpha$	170	12.5 Simple Harmonic Motion as a Projection of Circular Motion	233
		12.6 Energy Conservation in Simple Harmonic Motion	233
		12.7 Angular Simple Harmonic Motion	234
